

Heating the Toll House

Stove Shop has supplied and fitted a **Palazzetti Ecofire Insert Idro** wood pellet burning stove to provide all the heating and domestic hot water for this project.

The stove is connected to a heat store cylinder similar to the one shown below. From this cylinder is drawn the hot water to circulate through four independently controlled under floor heating circuits and the up stairs radiator circuit.

The cylinder also supplies mains pressure hot water at a blended temperature adjustable between 45* to 60*.

Stove Shop also stock wood pellets.
